

Testar assignment

Student: Erik Zhi Wei Wu - 852107622

SUT: <https://spotify.com>. Approved by Pekka Aho.

Background information

I have modified the web_one_drive protocol to get it working for <https://spotify.com>. It uses IE explorer as the browser, the entry point is <https://accounts.spotify.com>, which contains a login form.

The program contains a check to determine whether a login form is active by looping through all widgets. This will bypass the login portal.

Furthermore, I have removed one verdict (small pixel texts) from the program as almost every page of Spotify does not comply to this verdict.

Getting it to work

To get this protocol working, import it into Testar and fill in the variables spotifyUsername and spotifyPassword with existing Spotify credentials to bypass the login. Press save and compile, and you are ready to go.
